PROFESSIONAL SUMMARY

Computer Applications postgraduate (MCA, 2026) with hands-on project experience across Java, Spring Boot, React, and Node.js/Express.js, including a full-stack AI-powered application built with the Groq API. Comfortable designing REST-based backend services, integrating third-party APIs, and building responsive, user-friendly front-end interfaces. Strong fundamentals in OOP, data structures, algorithms, and relational database design (MySQL), with practical exposure to prompt engineering and AI integration. Detail-oriented and quick to learn new tools and frameworks; eager to contribute as a full-stack or backend developer in a fresher role.

SKILLS

Languages: Java, Python

Backend: Spring Boot, REST APIs, Node.js, Express.js

Frontend: React, HTML, CSS, Bootstrap, JavaScript

Database: MySQL

AI & APIs: Groq API, Prompt Engineering, AI Integration

Tools: Git, GitHub, VS Code, Postman

Core Concepts: OOP, Data Structures & Algorithms

EDUCATION

Master of Computer Applications (MCA) — Chandigarh University, Punjab

May 2026 | CGPA: 7.87

Bachelor of Computer Applications (BCA) — Chandigarh University, Punjab

May 2024 | CGPA: 8.19

PROJECTS

AI Code Reviewer | *HTML, CSS, JavaScript, Node.js, Express.js, Groq AI API, REST API*

- Developed a full-stack AI-powered code review web application that analyzes source code and delivers intelligent feedback using the Groq AI API, including bug detection, optimization suggestions, and time/space complexity analysis.
- Built a responsive two-page interface (landing page and review dashboard) with Express.js REST APIs to securely communicate with the AI model.
- Added file upload, PDF export, copy review, and dark mode for an improved, production-style user experience.

Supermarket Management System | *Java, MySQL*

- Built a desktop ERP-style billing and inventory management application supporting 100+ product SKUs with stock-level tracking.
- Designed database schema and billing workflows in MySQL, replacing a paper-based billing process in the demo environment.

To-Do List Application | *React, HTML, CSS*

- Built an interactive to-do list app with real-time task creation, editing, and deletion.
- Implemented state management using React's useState and useEffect hooks for dynamic, responsive UI updates.

CERTIFICATIONS

- MySQL — Udemy
- Data Structures & Algorithms with C++ — Udemy
- ReactJS — Infosys Springboard
